John Crane

Engineering U

Are you a U.S. student graduating with a bachelor degree in mechanical engineering in the spring of 2015? You may be eligible to join John Crane’s workforce as part of our engineering development program. Engineering U is a 12-month accelerated development program that offers select applicants the opportunity to learn and work alongside John Crane engineers, while gaining hands-on experience and post-program career placement in critical roles across John Crane. Placement is based on your aptitude, preferences, and company needs.

John Crane is headquartered in Chicago and is hiring for positions in the Accelerated Development Program. Essentially this is a rotation program for recent ME graduates where each engineer will rotate through different departments for a couple months at a time to get a feel for the projects and day-to-day work that takes place. There are also traveling opportunities for on-site work as well as training workshops across the country. Though this is strictly an engineering program, it is also highly focused on developing leadership skills through different training workshops such as personality training, presentation skills, finance, marketing, etc. It is a great opportunity for engineers coming right out of college, and I would highly recommend it. If you want to read about the company and program more, they can go to https://www.johncrane.com/about/careers and see the section titled “Engineering U”.

This is for ME students who graduated in December 2015 or will be graduating in May 2015 only. You can apply on that link provided, or contact Christopher Uvanovic at CUvanovic@johncrane.com. Resumes required, cover letters highly recommended. Feel free to contact Chris for any further questions prior to applying.
